

Hyperliquid Trader Performance & Bitcoin Market Sentiment

Comprehensive Data Analysis Report

Traders: 32 | Trades: 211,224 | Coins: 246

Date Range: 2023-05-01 to 2025-05-01

Executive Summary

Dataset contains 211,224 trades across 32 traders and 246 coins, merged with daily Fear & Greed Index values.

Key Findings:

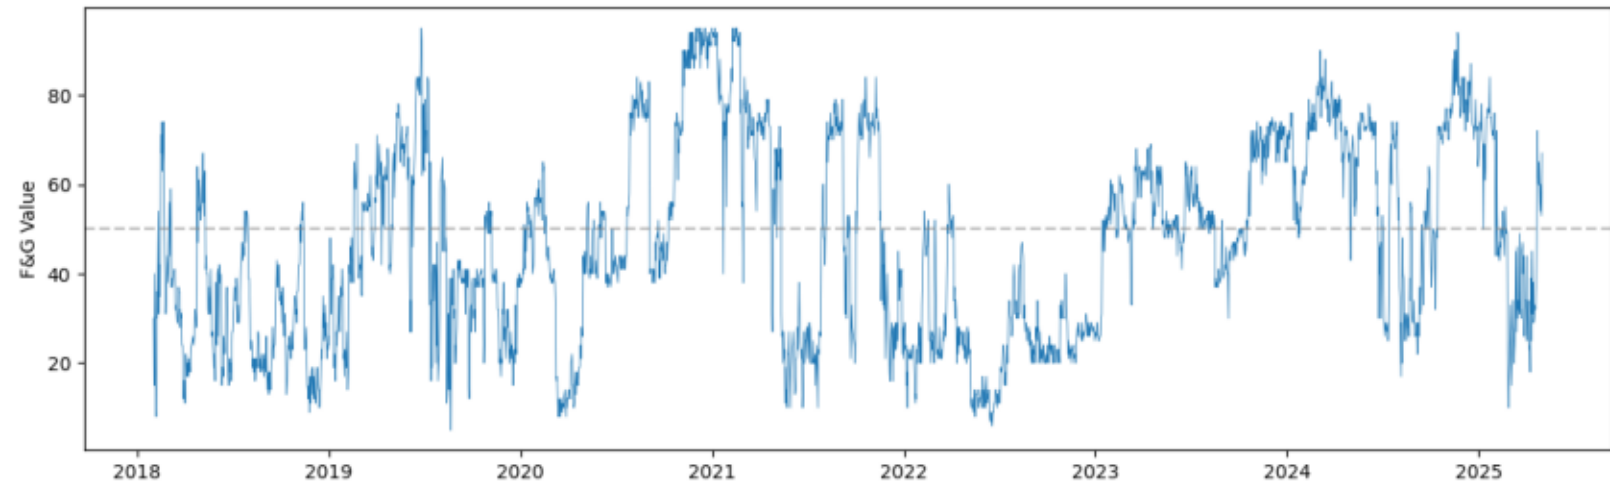

- Sentiment-Trading Correlation: F&G value vs trade count $r = -0.245$ (negative). Traders trade MORE during Fear, LESS during Greed.
- Best Sentiment for PnL: Extreme Greed (\$67.89 avg PnL). Worst: Neutral (\$34.31).
- Buy vs Sell Asymmetry: Sells win 85.9% of the time vs buys at 78.0%. Closing positions outperforms opening new ones.
- Top Coin: @107 (\$\$2,783,913 total PnL, 81.7% win rate). Liquid altcoins (SOL, ETH, BTC) consistently profitable.
- Fee Erosion: 4 / 32 traders lose more to fees than they earn in PnL.
- Trader Clusters: 5 clusters — from high-frequency/low-PnL to focused specialists.
- ANOVA: PnL differs significantly across sentiment categories ($p = 3e-6$).

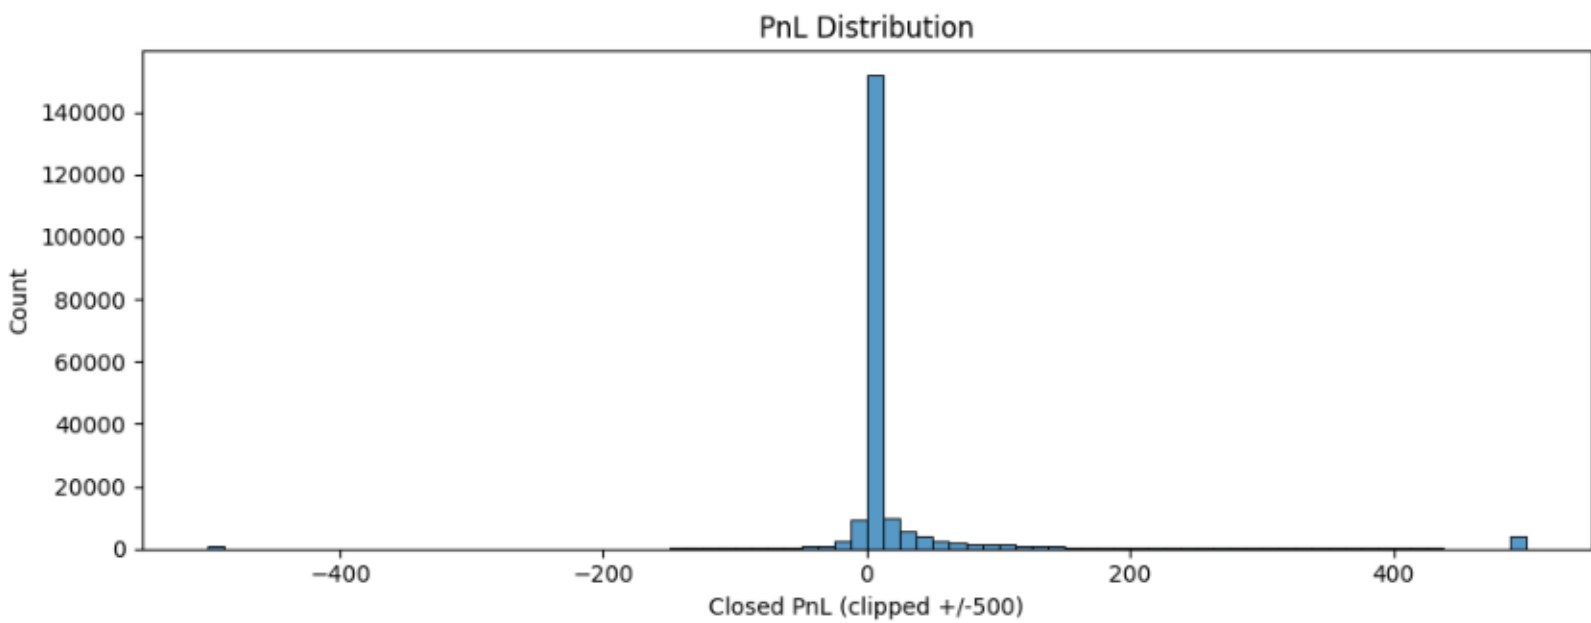

Bottom Line: Trade WITH sentiment, prioritize closing (sell), focus on top coins, and watch fee drag.

Data Overview

Metric	Value
Total Trades	211,224
Unique Traders	32
Unique Coins	246
Date Range Start	2023-05-01
Date Range End	2025-05-01
F&G Records	2644
F&G Date Range	2018-02-01 to 2025-05-02

Fear & Greed Index Over Time

Sentiment Analysis

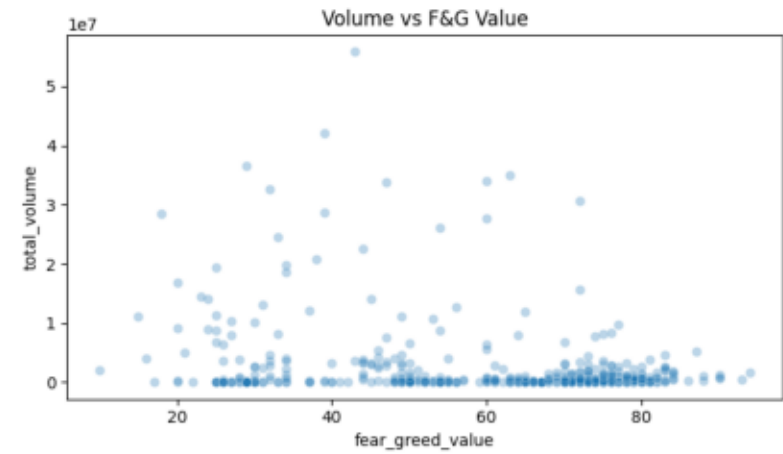

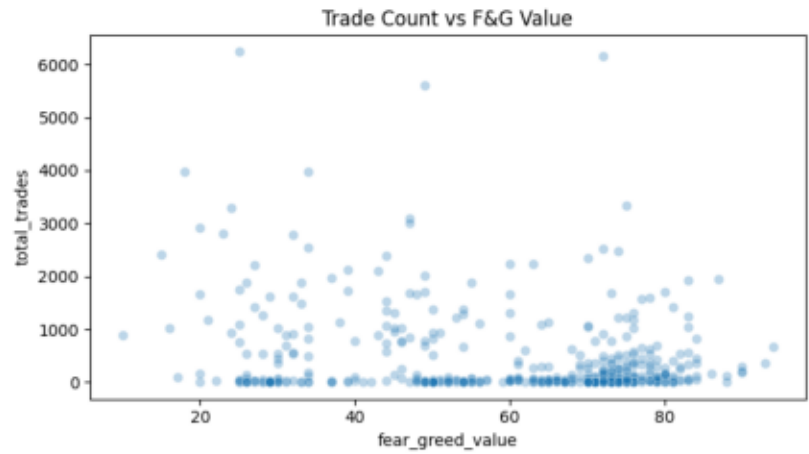

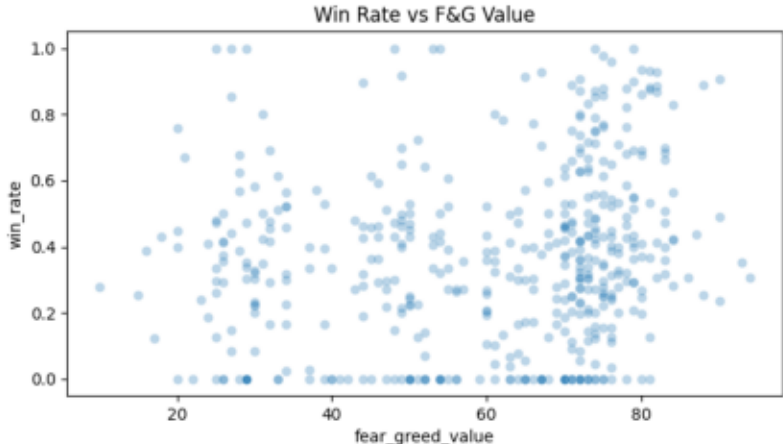

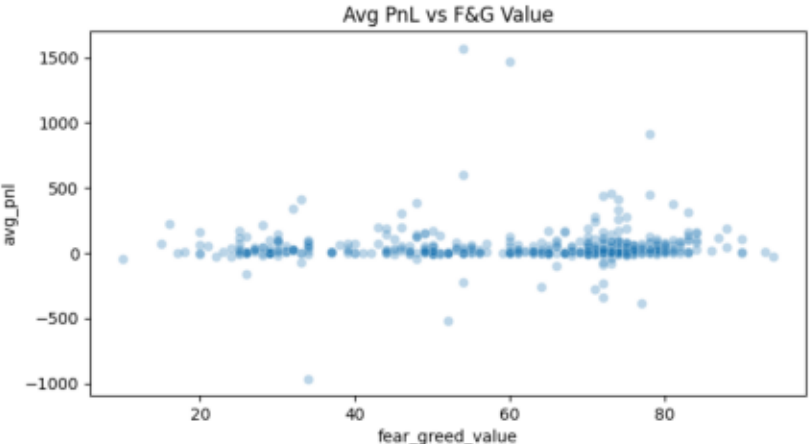

Correlation of daily metrics with Fear & Greed value:

- Trade count: $r = -0.245$
- Volume: $r = -0.264$
- Avg PnL: $r = 0.037$
- Win rate: $r = 0.152$

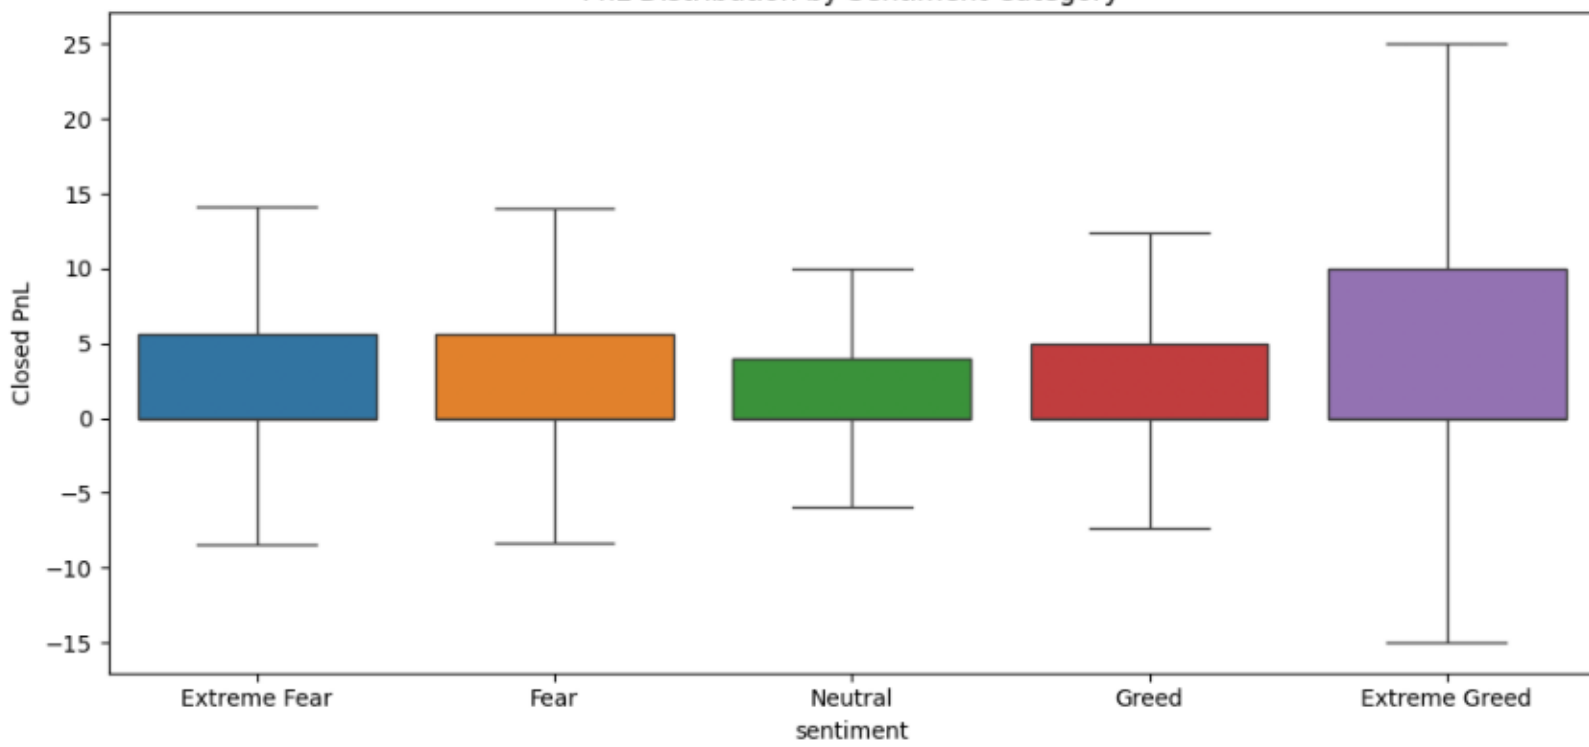

ANOVA confirms PnL varies significantly across sentiment categories ($p = 3e-6$).

Post-hoc tests show Extreme Greed significantly outperforms Neutral, Greed, and Extreme Fear.

Fear also significantly outperforms Neutral — traders find opportunity in fearful markets.

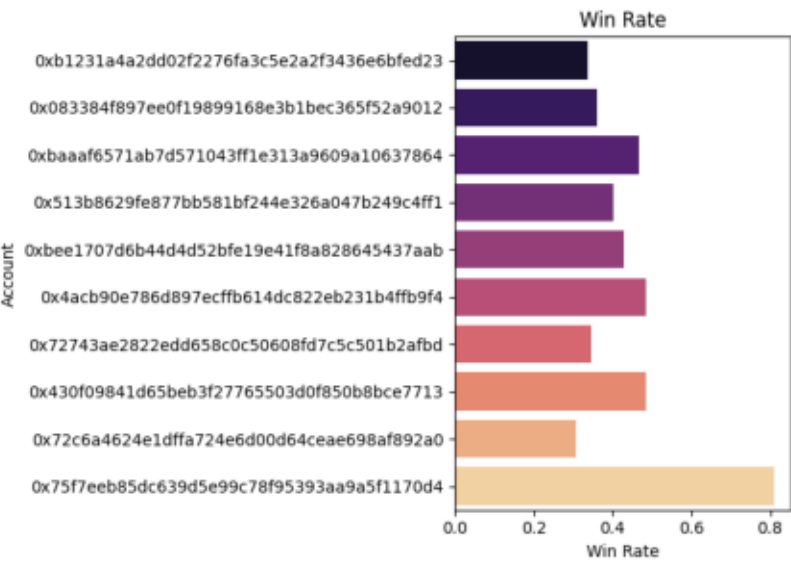

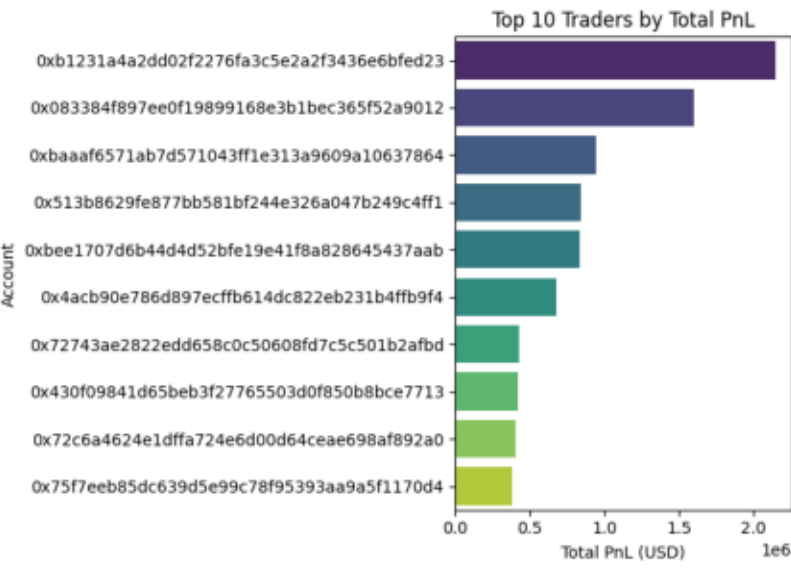

PnL Distribution by Sentiment Category

Top 10 Traders

Account	Total PnL (\$)	Win Rate	Trades	Coins
0xb1231a4a...	\$2,143,383	33.7%	14733	69
0x083384f8...	\$1,600,230	36.0%	3818	2
0xbaaaf657...	\$940,164	46.8%	21192	3
0x513b8629...	\$840,423	40.1%	12236	4
0xbee1707d...	\$836,081	42.8%	40184	16
0x4acb90e7...	\$677,747	48.6%	4356	12
0x72743ae2...	\$429,356	34.6%	1590	6
0x430f0984...	\$416,542	48.4%	1237	20
0x72c6a462...	\$403,012	30.6%	1430	26

Trader Clustering (K-Means)

Optimal clusters: 5 (silhouette score = 0.319)

- Cluster 0: 3 traders — mid-frequency, moderate PnL, high trade size
- Cluster 1: 5 traders — HIGH-frequency across many coins, highest total PnL
- Cluster 2: 18 traders (majority) — lower frequency, moderate PnL
- Cluster 3: 5 traders — focused (fewer trades, larger sizes), high PnL per trader
- Cluster 4: 1 trader — outlier with 81% win rate across 98 coins

Key insight: two distinct winning strategies exist — (a) high-frequency broad coverage, and (b) concentrated high-conviction trades with larger position sizes.

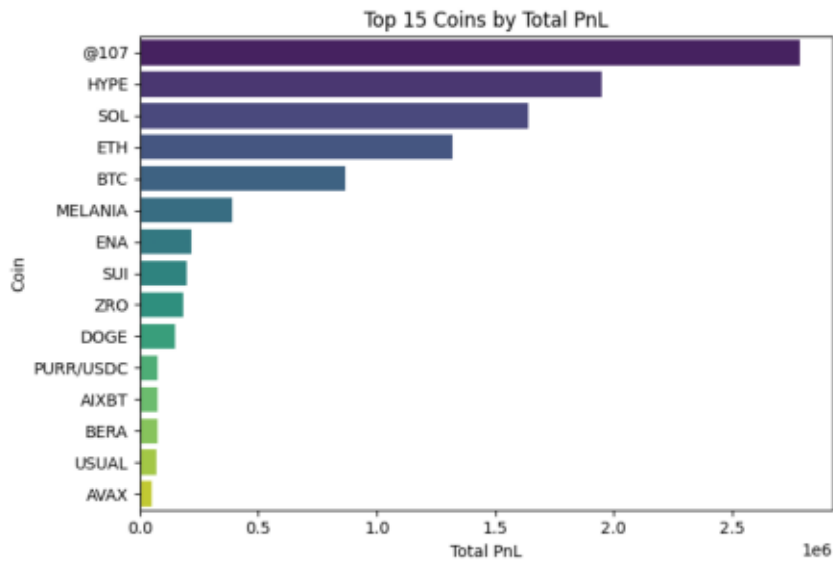

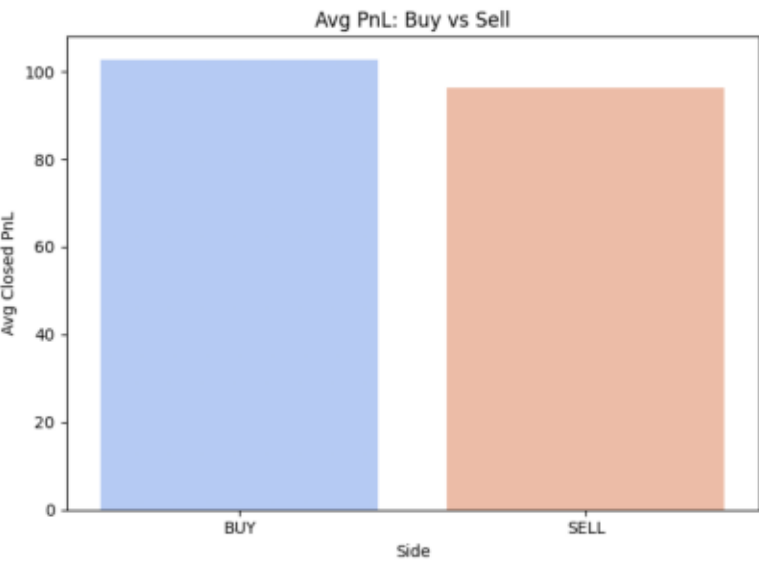

Hidden Patterns: Buy/Sell & Coins

Buy vs Sell Asymmetry:

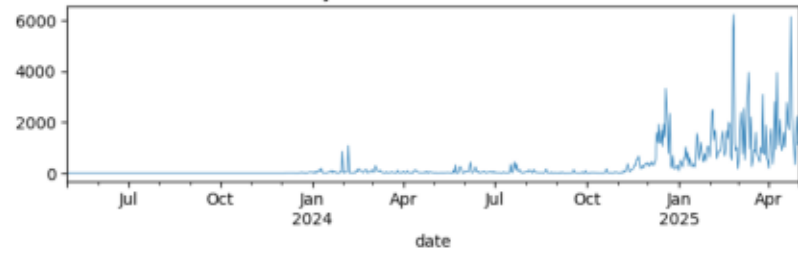

- Sell win rate: 85.9%
- Buy win rate: 78.0%
- Sell total PnL: \$6,589,148
- Buy total PnL: \$3,707,811

Top Coins (min 100 trades):

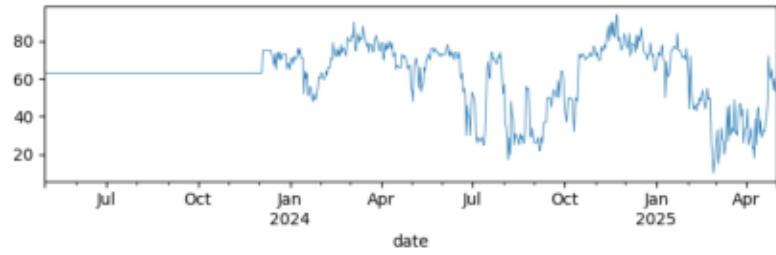

- @107 — \$2,783,913 PnL, 81.7% WR (17166 trades)
- HYPE — \$1,948,485 PnL, 88.2% WR (32011 trades)
- SOL — \$1,639,556 PnL, 83.9% WR (5030 trades)
- ETH — \$1,319,979 PnL, 76.8% WR (5228 trades)
- BTC — \$ 868,045 PnL, 83.1% WR (11009 trades)
- MELANIA — \$ 390,351 PnL, 88.9% WR (2211 trades)
- ENA — \$ 217,330 PnL, 93.4% WR (332 trades)
- SUI — \$ 199,269 PnL, 94.0% WR (893 trades)
- ZRO — \$ 183,778 PnL, 57.3% WR (794 trades)
- DOGE — \$ 147,543 PnL, 87.6% WR (459 trades)

Recommendations

1. Trade WITH Sentiment Momentum

Extreme Greed delivers the highest avg PnL (\$67.89). Increase position sizes during greed phases.

Avoid overtrading during Fear — activity spikes but avg PnL is lower.

2. Prioritise Closing (Sell) over Opening (Buy)

Sell trades win 85.9% vs 78.0% for buys. Consider mean-reversion or take-profit strategies.

3. Focus on Top-Performing Coins

@107, HYPE, SOL, ETH, BTC dominate PnL. ENA and SUI have exceptional win rates (>93%).

Avoid thinly traded coins — stick to liquid assets with proven track records.

4. Watch Fee Drag

4/32 traders lose more to fees than PnL. Maintain fee-to-PnL ratio below 5%.

Reduce frequency if fees are eroding profits.

5. Adopt Proven Trading Styles

Two profitable cluster strategies exist: high-frequency broad coverage (Cluster 1, avg \$651,838) and focused high-conviction (Cluster 3, avg \$609,729).

Choose one and optimize it — don't mix approaches.

6. Diversify Across 3-5 Coins

Top traders consistently trade 3-12 coins. Avoid over-diversification (98 coins) — the 81% win rate outlier is an exception, not a replicable strategy.

7. Track Risk-Adjusted Returns

Sharpe ratios range from -1.09 to 4.03. Target Sharpe > 1.0 for consistent risk-adjusted performance.

Profit factor should exceed 1.5 to justify trading costs.
